It is unnecessary here to enter into all the proof of the porosity of iron; that even thick castings are porous is shown by the trial-tests to which the large street mains for water supply, by the depth to which the carbon penetrates into the inner surface of cast iron gas retorts, when the manufacture of gas has been carried on for some time, are subjected. M. Mauj, engineer, describes in the *Annales des Ponts et Chaussées*, (1st ser. , vol. 8,) the method of testing the mains in Paris in 1834, which consists in filling them with water and subjecting them to a pressure of ten atmospheres by a hydraulic press. Detailing the effect of this pressure, he states that frequently on...
