RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 34 pages. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1983 Excerpt: . . . monazite crystals as much as 1 cm across in tin veins at Llallagua, Bolivia, contain no Th or Eu but, like the low-Thhigh Eu monazite from Malaysia, are associated with cassiterite (Gordon, 1939, 1944). A monazite from Belorussia, U. S. S. R. , contains 0. 11 percent ThO₂, has about 0. 07 percent Eu₂O₃, is pale greenish yellow, and is thought to be of metasedimentary origin (Serdyuchenko and others, 1967). Six pinkish-yellow monazites from the southern Urals have no ThO₂ and about 0. 1-0. 5 percent Eu₂O₃, and six yellow monazites from the Pamir Range contain about 1. 8-3. 6 percent ThO₂ and 0. 1-0. 4 percent Eu₂O₃ (Komov and others, 1974). A pneumatolytic white to red and brown-red monazite in the northern Caucasus contains about 2. 39 percent ThO₂ and 0. 06 percent Eu₂O₃ (Ploshko, 1961). Earthy monazite from a vein in carbonatite at Magnet Cove, Ark. , U. S. A. , contains no detectable Th, and the low content of Th as well as of Y is thought to be characteristic of monazites from alkalic rocks (Rose and others, 1958, p. 996). Abnormally low ThO₂ (0. 08 percent) is recorded for pistachio-green and colorless monazites from a carbonatite at Kangankunde Hill, Malawi, and the Eu₂O₃ content is 0. 05 percent (Holt, 1965). A high Th content in monazites is directly related to high-grade conditions of temperature and pressure during magmatic or metamorphic crystallization (Overstreet, 1967, table 2; Overstreet and others, 1969). The greatest amounts of ThO₂ Table 10. --Comparison...
